Squiz CMS

Squiz CMS is a revolutionary open source content management system (CMS) which sets new standards for ease of use, collaboration and deployment. Featuring a highly usable interface, Squiz CMS makes it easy to create, publish and maintain websites. Squiz CMS is the user friendly interface of Squiz Suite, the advanced set of software tools developed in-house by Squiz as an agile platform for managing and optimising online presence.

Update Anything, Anywhere

Inline Editing

Forget learning 'backend' systems or complicated concepts; just click to edit. All page elements and content are editable within the design of your site, even the navigation.

Create Pages

Intuitive wizards let you quickly and easily add new pages, files and users. Even complex pages like forms are easy to create with a simple step-by-step process.

Images and Video

Creating image galleries and embedding videos has never been easier. Select your images and the CMS will create a gallery for you. Videos are converted to the right format and embedded with user controls.

Design Templates

A powerful design template system means you can make your site look any way you want it to. Pick from a range of pre-loaded templates or create your own fully customised designs.

Online Collaboration

Track Changes

Team collaboration on the same document is straightforward with track changes. See the changes made by other editors, add comments and approve or reject changes – all within the design of your website.

Visual, Task Based Workflow

Configurable workflow options, flexible permissions and multiple approval streams give you complete control over approval processes so they work exactly the way you want them to.
